

# INFORMATION ABOUT THE FINAL PROJECT

An online football shirts shop has been created, with a main menu, a catalogue and a contact page. On this page the user can register and log in, this is done from the connected database, which stores the users.

HTML, CSS and Bootstrap have been used for the complete design of the page. PHP has also been used to make the queries in the database and to include some warning scripts in some functionalities.

We have also used javascript for different functionalities such as: The sidebar that follows the user's view on the page to facilitate navigation, the arrow that appears when scrolling down the page to return to the home page, or the functionality of the shopping cart.

In the catalogue, when the user is logged in, a JSON file is used to store the entire catalogue with the available T-shirts and their data: price, name, corresponding image...
